DATA ENHANCEMENT

Enhancement with additional information from the D&B database, e.g. family tree, sector, sales, rating

Once the supplier master sets have been identified using the D-U-N-S® number, they are enriched with additional data elements from the D&B database. This enrichment process makes your data particularly valuable. Your supplier file is then enriched with further elements, such as the corporate networks (family trees), the international SIC industry code, the supplier yearly turnover or the D&B rating.

Do you have any questions concerning data enrichment?

We are happy to help at any time, by phone 044 735 61 41 or at solutions@dnb.ch.
